Aspivia

Control and manage your telecoms spend.

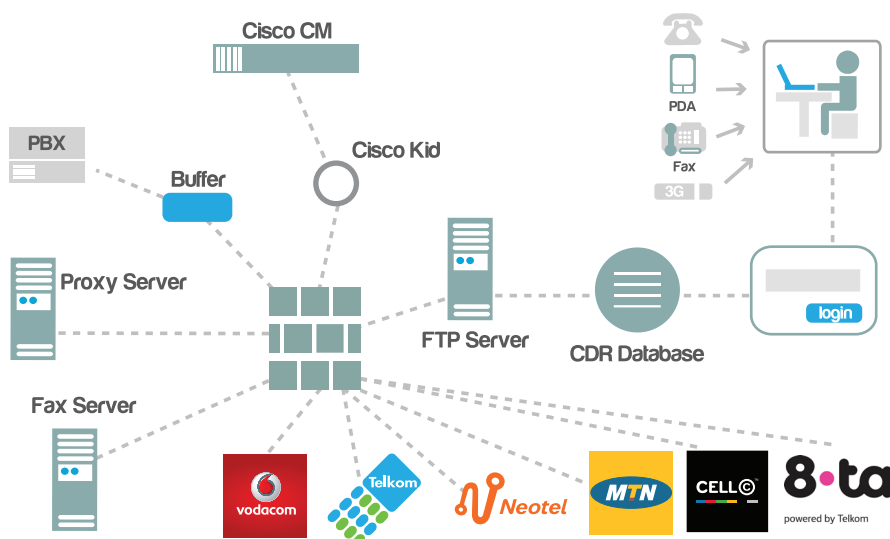

The Aspivia TI Solution is a market leading Communications Expense Management Software System, providing businesses with a single platform to manage and control their complete ITC spend. Aspivia integrates multiple communication data sources to give a consolidated view of the company's telecoms spend and delivers on all aspects of Cost Allocation, Cost Recovery and Cost Reduction across the entire telecommunications environment, including variable monthly costs and fixed infrastructure spend and planning.

Aspivia TI allows for:

- **Cost allocation** – Accurate distribution of communication costs throughout various branches, departments and cost centres within the business
- **Cost recovery** – Access to real time information, empowering users and managers to monitor and take ownership of costs
- **Cost reduction** – Monitoring and auditing of Service providers allows for more effective infrastructure and strategy planning
- **User behaviour modification** – Monitor and analyse individual user behaviour, report on costs and implement private usage alerts and notifications

The solution is able to report on all the current Telco Carriers in South Africa.

Typology Diagram

Benefits

- Monitoring and reporting on all device traffic including voice 3G, SMS, MMS and internet Proxy Usage
- Policing of traffic and user behaviour
- Compliant to the information acts regulated by SA law including the KING II Act and ETC Act
- Full automation of services including reminders and alerts on usage
- Consolidation of telecommunication reporting across all divisions and branches, giving a single view of the company spend
- Web based application which allows for full off-site technical management as well as anywhere access for company users
- Allows for accurate changes and recommendations by understanding your usage patterns
- No large upfront capital outlay required. Costs are built on an Opex model where businesses will pay per device per month
